

Magnim Maxime AWILI

Technical Lead | Cloud Architect | Platform Engineering & AI Infrastructure

Cloud Architect and Technical Lead with 9+ years of experience designing, deploying, and operating mission-critical platforms in the banking and payment industry. Specialized in cloud-native infrastructure modernization, distributed systems, and DevOps automation. Experienced in leading technical initiatives from architecture design through production deployment while collaborating with engineering teams, business stakeholders, and operational teams.

Recently involved in GenAI initiatives, helping evaluate and integrate AI-driven solutions to accelerate software modernization and promote AI adoption across engineering organizations.

CORE SKILLS

Cloud & Infrastructure: Private Cloud, Hybrid Cloud, AWS, GCP, Kubernetes, Docker, Linux

Platform Engineering & DevOps: CI/CD, Jenkins, GitHub Actions, Terraform, Ansible, AWX, Helm

Programming: Python, Java, Go, JavaScript, Shell

Distributed Systems & Data: Kafka, PostgreSQL, MongoDB, Elasticsearch, Redis, Artemis, IBM MQ

Architecture & Leadership: Solution Architecture, Technical Leadership, Stakeholder Management, Technical Discovery, Infrastructure Modernization, Team Enablement, Architecture Documentation, Training & Mentoring

PROFESSIONAL EXPERIENCES

Technical Lead / Cloud Architect - TRANSACTIS

07/2020 – Present

Schiltigheim

TRANSACTIS is a subsidiary of Société Générale and La Banque Postale, specialized in real-time payment processing and payment platform services.

Key Responsibilities and Achievements

AI & Innovation

- Contributed to enterprise GenAI initiatives, applying AI solutions to software modernization and migration use cases.
- Promoted AI adoption across engineering teams by identifying high-value use cases and sharing best practices.
- Participated in the evaluation and integration of AI-enabled solutions within enterprise environments.

Architecture & Platform Engineering

- Served as Technical Lead for the Payments, Digital Services, and ATM departments.
- Defined technical standards, architecture guidelines, and modernization roadmaps.
- Designed and implemented private cloud capabilities supporting infrastructure transformation initiatives.
- Architected and deployed Kubernetes-based platforms supporting critical business services.
- Led architecture reviews and produced infrastructure and application architecture documentation.

Infrastructure & Cloud Platforms

- Designed and deployed enterprise platform services covering compute, block/object/file storage, Kubernetes platforms, SQL and NoSQL databases, load balancing, and traffic management.
- Implemented and operated supporting services including Kafka, MongoDB, PostgreSQL, Redis, Artemis, HAProxy, and NGINX.

Security & Reliability

- Improved platform security through service mesh adoption, mTLS, and OAuth2 integration.
- Led initiatives focused on resiliency, performance optimization, and service availability.
- Managed infrastructure lifecycle and obsolescence programs for critical platforms.

Leadership & Enablement

- Delivered technical workshops and training sessions on cloud-native technologies.
- Supported engineering teams in architecture decisions and platform adoption.
- Coordinated initiatives from design through production deployment.
- Acted as a technical reference across multiple departments and strategic projects.

DevOps & Automation

- Implemented CI/CD pipelines using Git, Jenkins, GitHub Actions, and Kubernetes.
- Automated deployments across modern and legacy environments using Ansible and AWX.
- Increased operational efficiency through infrastructure automation and standardization.

Software Engineer - SOPRA STERIA - TRANSACTIS

April 2017 – June 2020

Schiltigheim

Responsibilities and Achievements

- Maintained and evolved the overall technical architecture of enterprise applications.
- Developed automation tools for deployment, integration, and monitoring using Java, Oracle, and TIBCO.
- Contributed to large-scale migration projects involving IBM AIX, Oracle, WebLogic, TIBCO BW, and EMS.
- Supported high-availability initiatives for critical applications, including 24/7 service availability and zero-downtime deployments.
- Developed integration flows and supporting tools on the TIBCO platform.
- Optimized performance, reinforced application security, and supported business teams on technical topics.

Engineering Intern

SOPRA STERIA – TRANSACTIS

September 2016 – February 2017

Schiltigheim

- Developed monitoring and alerting capabilities for payment system domains using TIBCO BW and Oracle.

SOCIETE GENERALE

September 2015 – February 2016

Schiltigheim

Société Générale is one of France's leading banking groups.

- Developed and maintained Java/DB2 tools supporting payment system parameter management.

CERTIFICATIONS & TRAINING

Cloud DevOps Engineer Nanodegree

- Cloud architecture and infrastructure design on AWS, Infrastructure as Code, CI/CD automation and deployment pipelines, Kubernetes and container orchestration, monitoring, logging, and cloud security.
- **Final Project:** Designed and deployed a cloud-native platform leveraging Jenkins, Docker, AWS ECR, and Kubernetes on Amazon EKS.

LANGUAGES

French: Native

English: Full Professional proficiency

EDUCATION

Master's Degree in Computer Engineering (BAC +5)

UTBM - University of Technology of Belfort-Montbéliard

INTERESTS

Artificial Intelligence, System Design, Cloud, Basketball, Cycling
